TAJUDEEN OLUGBENGA RABIU

Data Analyst | SQL · Power BI · Python (pandas) · Microsoft Excel

Akure, Ondo State, Nigeria | +234 803 482 5060 | tjrabiu.data@gmail.com

linkedin.com/in/tajudeen-rabiu-data | github.com/teejay-data-io | Portfolio: teejay-data-io.github.io

SUMMARY

Data Analyst focused on product analytics, growth analytics and customer retention: SQL for product questions, cohort retention in Python (pandas), and Power BI dashboards that end in clear recommendations. ANAN-certified accountant who reconciles every figure to source and explains it plainly to non-technical stakeholders.

SKILLS

SQL (MySQL): data cleaning, multi-table joins, aggregations, KPI queries (GMV, AOV, rates)
BI & Dashboards: Power BI (DAX measures, Power Query, data modelling, slicers, multi-page reports)
Python: pandas (data cleaning, cohort retention), data visualisation of behaviour and engagement
Spreadsheets: Microsoft Excel and Google Sheets (pivot tables, lookups, what-if / scenario models, formatted reporting)
Analytics: cohort retention, customer retention and churn, engagement analysis, KPI reporting, data validation and reconciliation, stakeholder communication

PROJECTS

Olist E-commerce: Customer Behaviour, Retention & Engagement *MySQL · pandas · Power BI · Excel*

github.com/teejay-data-io/olist-ecommerce-analysis — *Brazilian marketplace data: 96,478 delivered orders, 93,358 customers, GMV R$15.42M, AOV R$159.85, average review 4.16.*

- **SQL:** cleaned 8 raw tables into one analysis table (orders_clean) and wrote KPI queries for GMV, AOV, late-delivery rate and review scores.
- **Retention (pandas):** built a cohort retention heatmap; only 3.0% of customers (2,801) ordered again, so 97% bought once.
- **Engagement:** 8.1% of orders arrived late; late orders average 2.57 stars vs 4.29 on time, and late rates reach 23.9% in AL and 19.7% in MA.
- **Power BI:** 4-page dashboard (Behaviour, Retention, Engagement, Summary) with DAX measures, State and Month slicers, and three recommendations.
- **Excel:** what-if profit model with a 27-state summary and inputs for late-order cut, repeat-rate uplift and an assumed margin (labelled as an assumption); base case adds about R$298.6K GMV.

Retail Sales Analytics *SQL · Power BI*

- SQL exploratory data analysis of 1M orders: $2.75B revenue, AOV $2,750.87; github.com/teejay-data-io/Data_Analysis_Portfolio

Customer Retention (Churn) Dashboard *Power BI · DAX*

- Analysed 7,043 customers: 26.5% churn costing $139,131 a month; month-to-month contracts churned at 45.8% vs 2.5% on two-year contracts.

EXPERIENCE

Freelance Accountant | Self-employed, Akure *2015 – Present*

- Reconcile bank, cash, customer and supplier accounts and resolve differences before figures are reported.
- Prepare monthly management accounts and annual financial statements; build Excel workbooks tracking sales, expenses and cash flow.

Accountant | RoyalGate Marketing Ltd, Abeokuta *2012 – 2015*

- Prepared monthly management accounts and annual financial statements for the directors; reconciled bank, cash, customer and supplier accounts every month.
